

passed through the hole. Be sure to have all the scallop threads laying beside each other and not overlapping. This creates a nice lacey look.

Even though your motif is now technically ready for the pulled and drawn work, you want to finish the remainder of your stitching. For our projects we will do the padded satin stitching next.

SATIN STITCH (Plattstich): The direction of your stitching is determined by the object you are doing. For the heart, you need to decide if you want the stitches to be vertical or horizontal. Make sure your stitches are close together but not overlapping.

An alternative approach is the Padded Satin Stitch, which produces a slightly raised surface. For the padded satin stitch, work the base layer slightly inside the outline of the design, with the thread running perpendicular in direction to those on the final layer of stitches. You can work your heart with either satin stitch option.

Always finish the edges around the satin stitch with a row of coral stitches.

Finishing up the surface work:

Next work the lines under the heart with a row of coral stitches.

The "00" and top of the "9" in "2009" on are done in the buttonhole scallop, just stitching a full circle with all the stitches going through one center hole.

The "2" and the back of the "9" are done in coral stitches.

Preparing to Cut

Now that you have completed all the surface stitching, it is time to cut the threads inside the box motif. Find the middle thread in one direction and carefully cut that thread. It helps to slip a needle or laying tool under the thread to lift it up to cut. You may find it easier to cut the thread in the very middle of the design and pull it out each direction rather than cut it at one end. You want to cut each thread separately. This filler stitch requires a 1-3 grid (cut one thread, leave three threads). The pattern shows the 1-3 grid you will have when you finish your cutting.

Do one direction at a time. Start with the horizontal threads. Cut one thread and pull it out. When you have it pulled out clear to the edge, bring that thread to the back of your project and clip it as close to the chain stitch border as possible. Skip three threads and cut one thread, pulling it out and cutting it close to the chain stitch. Complete your horizontal 1-3 grid. Then do the exact same thing with the vertical threads, starting in the middle of the motif creating a 1-3 grid. Once you have one direction done, you want to do the other direction, also in a 1-3 grid. Depending on your thread count, you may not end up with 3 threads on the side of your design. That's okay. You will stitch your filling stitches to fill in those spaces as if there were three threads there. They won't look exactly the same but they are known as compensation stitches.

The final step for our projects is to do out filling stitching in the open grid. Several references suggest that you wash out your transfer marks before you do the filling stitches. If you have used a water soluble marker you should be able to use a damp Q-tip to dissolve them. You will still want to clean your piece when you are finished to remove oils and dirt.

For this projects we are using the "Rose Stitch", one of the most popular filling stitches for Schwalm. When it is finished, it sort of resembles a tiny rose in the center of the grid.

ROSE STITCH (Rosenstich): Start at the bottom left-hand corner of the grid. You are going to move on the diagonal across the design as you complete the stitch. Do not confuse this with a Dove's Eyes in Hardanger embroidery. There will not be a design in the open area because we will be pulling the threads together to close that opening. You want to use the lightest weight thread, #12 for this filler stitch. There are 6 steps.

Step 1: Secure the working thread in the back of the fabric by running it through the chain stitch or coral knots. Bring the needle out in the center of an open grid. (A). You are actually moving on a diagonal, so this diagram shows the threads if you turn your project a quarter turn counter clockwise. Some of the ladies kept the grid squared up and

visualized the order of work as North, South, East and West.

Step 2: Starting with the lower right-hand quadrant, take your needle over the 3 fabric threads in the grid, going down in the hole left by the pulled thread. (1) Bring your needle back up through the original center hole (A). Make sure that your needle goes over the top of the stitching thread and pull it snug. (If you kept your grid square, you would go through the hole to the south.)

Step 3: Go to the upper right-hand quadrant, going over the 3 fabric threads, going down that hole (2). Bring your needle back up through the original center hole (A). Make sure that your needle goes over the top of the stitching thread and pull it snug. (If you kept your grid square, you would go through the hole to the east.)

Step 4: Go to the upper left-hand quadrant, going over the 3 fabric threads, going down that hole (3). Bring your needle back up through the original center hole (A). Make sure that your needle goes over the top of the stitching thread and pull it snug. (If you kept your grid square, you would go through the hole to the north.)

Step 5: Go to the lower left-hand quadrant, going over the 3 fabric threads, going down that hole (4). Bring your needle back up through the original center hole (A). Make sure that your needle goes over the top of the stitching thread and pull it snug. (If you kept your grid square, you would go through the hole to the west.)

Step 6: Take your needle down below the stitches through the hole (A) and come up in the next lateral hole (B) created by the pulled thread grid. Pull snug. Repeat the steps beginning at Step 2. (If you kept your grid square, you would take your needle back through hole A and come up in the next hole to the upper right-hand side of your finished rose.)

Here is how this stitch is shown on a graph and that may help you visualize it a little better. Remember you are actually working on a diagonal. Also, you may find it helps to turn your frame or hoop with each step.

When you get to the edge of your design you may not have enough of the grid to do an entire Rose stitch. You will want to do a “compensation stitch” which means that you do as much of the stitch as you can. Perhaps you only can do the lower right- and left-hand quadrants. Be sure to secure your thread through a couple of the chain stitches on the back before coming up in the next open hole above your completed line. Work on the diagonal back down to the lower left of the piece. Complete the upper part of the motif and then go and fill in the bottom part. Be sure to end your thread at the side of the motif so you can adequately secure it.
